LEGEND

Preservation Area

Preservation Area

Class 6 Soils in this class are capable only of producing perennial forage crops and improvement practices are not feasible. The soils provide some sustained grazing for farm animals, but the limitations are so severe that improvement by use of farm machinery is impractical, terrain may be unsuitable for use of farm machinery, the soils may not respond to improvement, or the grazing season may be very short.

Class 7 Soils in this class have no capability for arable culture or permanent pasture. This class also includes rock land, other non-soil areas and bodies of water too small to show on maps at mapping scale.

'T' Topography This subclass is made up of soils where topography is a limitation. Both the percent of slope and the pattern or frequency of slopes in different directions affect the cost of farming and the uniformity of growth and maturity of crops as well as the hazard of erosion.
